Education

Silver Oak University

Bachelor of Computer Science Engineering

Ahmedabad, India

2024 – 2028

Experience

Operisoft Technologies Pvt Ltd.

Technical Consultant

Ahmedabad, India (Remote)

Jul 2025 – Present

- Owned 4+ microservices within a distributed architecture, driving end-to-end development, maintenance, and incident resolution across services.
- Drove the full AWS infrastructure stack across ECS, ECR, CodePipeline, and API Gateway — owning both the DevOps pipeline and service-level development in a hybrid dev/ops role.
- Reverse-engineered Java-based .exe JAR files and containerized them for AWS Lambda via Docker, eliminating dedicated compute overhead and saving ~\$300/month in infrastructure costs.
- Built a Chrome Extension to automate client-side data fetching from third-party portals, receiving credentials from the host application, spawning a sandboxed Chrome window, and injecting content scripts into the target page to execute authenticated API calls natively — eliminating CORS restrictions entirely.
- Designed a secure credential relay architecture between the host web app and the Chrome Extension, ensuring sensitive user credentials were passed in-memory to the extension context without ever being transmitted to the backend.
- Reverse-engineered a production website with encrypted API payloads, decoding obfuscated request/response layers to map undocumented endpoints for integration purposes.
- Architected a multi-tenant system with custom domain support, implementing wildcard subdomain routing backed by AWS Certificate Manager and an Application Load Balancer for automated SSL provisioning and per-tenant domain resolution.
- Functioned as a Solution Architect, designing High-Level Design (HLD) documents and end-to-end system blueprints to translate business requirements into scalable, production-ready architectures.

Skills: React, Node.js, AWS, Docker, WXT Framework, Java, Microservices, Reverse Engineering, System Design

Petwell Solutions Inc.

Software Engineer Contract

Remote

Sep 2025 – Present

- Worked as a Full Stack Engineer on a pet health SaaS product, maintaining and extending a React frontend and NestJS backend across the full application lifecycle.
- Owned end-to-end DevOps lifecycle, implementing CI/CD pipelines for automated staging and production deployments, managing release stability and environment configurations.
- Integrated AWS Knowledge Base and OpenSearch for semantic document search, implementing retrieval optimizations to improve LLM response accuracy for pet health queries.
- Built an AI Agent using LangGraph with full user activity history as context, enabling personalized, state-aware interactions across the platform.
- Integrated OpenTelemetry (OTEL) with NewRelic for LangGraph observability, enabling trace-level visibility into agent execution, LLM calls, and tool invocations in production.

Skills: React, NestJS, Node.js, AWS, LangGraph, OpenTelemetry, NewRelic, Docker, CI/CD

StepIn Company Corp

Software Engineer Intern

Dallas, Texas (Remote)

Mar 2025 – Aug 2025

- Built core infrastructure for a LinkedIn-style hiring platform enabling companies to post jobs, manage thousands of applications, and surface top candidates via natural language search and AI-powered recommendations.
- Architected a scalable NestJS monolith backend with a React frontend, establishing core application structure and API design patterns from the ground up.
- Owned the full DevOps lifecycle, implementing CI/CD pipelines for both frontend (AWS Amplify) and backend (AWS ECS), reducing manual deployment overhead significantly.
- Introduced GenAI-powered candidate-JD matching using LLM-based semantic analysis to surface the most relevant applicants for a given job description, replacing manual screening.

- Built a resume-to-job recommendation engine using LangGraph, scoring and ranking job listings against candidate profiles across skills, experience, and resume content to deliver personalized match scores.
- Designed and deployed automated data ingestion pipelines scraping job listings from multiple portals, orchestrated via Prefect DAGs for reliable scheduling and fault-tolerant execution.

Skills: NestJS, React, AWS Amplify, AWS ECS, LangGraph, Prefect, PostgreSQL, Docker

Codomotive

Kolkata, India (Remote)

Software Development Engineer – Intern

Mar 2024 – Oct 2024

- Migrated legacy MySQL Java backend to Postgres, facilitating transition from server-based architecture to serverless (NeonDB).
- Developed passwordless OTP-based authentication in Node.js for seamless user registration.
- Implemented a custom Golang mediator server to constantly service inside Tomcat environment and restart Docker container if it becomes unresponsive.
- Built a one-to-many communication system using WebRTC in Node.js with a Vue.js frontend.
- Implemented Grafana and Prometheus for monitoring stack.

Skills: Node.js, TypeScript, Back-end, MySQL, Vue.js, Grafana, Prometheus, Postgres

Critical X Esports Private Limited

Mumbai, India (Remote)

Data Analyst – Full-time

Dec 2022 – May 2023

- Carefully implemented third-party APIs to simplify pipeline of retrieving data from sources, which led to complete removal of human intervention.
- Handled complexity of interconnecting over 80+ sheets, ensuring overall compatibility and normality.
- Created custom formulas with the help of Google Apps Script to fetch data on-demand, reducing dependencies on client (indiGG).
- Created a Python script that automated process of retrieving certain data points from 500+ screenshots daily.

Skills: Web Scraping, Sheet Formulas, Python, JavaScript, OCR

KO.GG Esport Private Limited

New Delhi, India (Remote)

Software Development Engineer – Intern

Apr 2022 – Oct 2022

- Developed scalable RESTful APIs with Node.js framework in monolith architecture.
- Implemented JWT-based authentication in REST APIs and enhanced it using Refresh Tokens.
- Created and designed schema models using MongoDB and Mongoose.
- Developed an integration with Telnyx and Twilio to enable SMS OTP verification of onboarding users.

Skills: Node.js, Back-end, MongoDB, RESTful APIs, JavaScript, Git

Critical X Esports Private Limited

Mumbai, India (Remote)

Developer – Freelance

Dec 2019 – Mar 2022

- Created a Discord Bot using Python to assist the community and retrieved useful statistics to fulfill the company's on-demand data requirements.
- Developed automation scripts to simplify processes involved in data retrieval; built scripts to automate time-consuming procedures requiring human work.
- Leveraged Google Sheets API to save all data-oriented tasks in Google Sheets, enabling enhanced data visualization through collaboration.

Skills: Python, discord.py, API Documentation, RESTful API, Web Scraping, JavaScript, Automation

Technical Skills

Languages: Python, JavaScript, TypeScript, Rust, Golang, SQL

Frameworks & Libraries: Node.js, Express, NestJS, React, Vue.js, LangGraph

Databases: PostgreSQL, MongoDB, MySQL, OpenSearch

Cloud & DevOps: AWS (Bedrock, ECS, Amplify, S3), Docker, Grafana, Prometheus, Prefect

AI/ML: LangGraph, OpenAI Vision API, AWS Bedrock, GenAI Pipelines

Other: WebRTC, RESTful APIs, JWT/RBAC, Web Scraping, OCR, Reverse Engineering
